CORE AREAS

Agile Methodologies

Analytics

Cybersecurity

Data Structures

DevOps & CI/CD

Digital Logic Design

FPGAs

Microprocessors

Network Security

Object-Oriented Programming

SDLC & Product Development

Systems & Network Administration

Testing & QA

TECHNICAL SKILLS

C/C++, Python, Java, Powershell,
Bash, Excel Macros, JavaScript, SQL,
Assembly (ARM, MIPS), VHDL, Ansible,
VMWare, Cisco IOS, Git, Android
Studio, Cadence, Vivado, Visual
Studio, Git, Cloud Technologies

CERTIFICATIONS

**Cisco Certified Network Associate
(CCNA)**

ISC2 Certified in Cybersecurity (CC)

AWS Cloud Practitioner (in progress)

XAVIER QUINTANILLA

COMPUTER ENGINEERING STUDENT

Growth-focused Computer Engineering student with hands-on experience combining hardware design, software development, network and systems engineering, cybersecurity, and technical support. Committed to excellence, adept at writing well-tested, reliable, testable, and maintainable code. Analytical and detail-oriented, adept at prioritizing and allocating resources to meet demanding objectives and deliverables in dynamic environments. Exceptionally dedicated professional with impressive communication and collaboration skills, thrives in dynamic cross-functional settings.

EDUCATION

BS IN COMPUTER ENGINEERING – NANOSCALE SYSTEM DESIGN CO-OP | MAY 2026

UNIVERSITY OF ALBERTA, EDMONTON, AB

PROFESSIONAL EXPERIENCE

SYSTEMS ENGINEERING INTERN | JAN 2024 – AUG 2024

EXXONMOBIL, EDMONTON, AB

- Designed, maintained, and serviced the entire server, system, and network infrastructure of the refinery's Renewable Diesel Unit, driving service availability, reliability, security, and 99.9% uptime.
- Introduced new network monitoring and analysis practices via WinWatch, enhancing real-time threat detection, slashing issue reporting timescales by 700%.
- Pioneered a customized training plan for a new Systems Engineer hire by analyzing role-specific requirements, identifying core competencies, and delivering targeted resources and mentorship, reducing onboarding time by 30% and ensuring the hire met operational performance goals within the first 30-90 days
- Developed detailed and accurate documentation of the network architecture, labeling hardware components and cables, and recording diagrams and specifications to reduce future troubleshooting and maintenance timescales by up to 100%.
- Pioneered automation solutions and deployed two Python command-line tools for web scraping and data extraction from Control System Servers, cutting manual data entry by 90%.

SOFTWARE R&D INTERN | JUN 2023 – AUG 2023

BAYTEQ, QUITO, ECUADOR

- Supported the full-cycle design, development, and deployment of an app in an Agile setting, overseeing all aspects from requirements gathering to design and deployment.
- Introduced workflows to manage the information of 50+ employees stored in Dataverse, leveraged MS Power to automate data processing, and developed absences management app that provided real-time insights into workforce availability.
- Researched and proposed the use of advanced AI and cloud technologies (Azure Cognitive Search, Google Palm, IBM Watson) to develop proof of concept and validate solution for a major client.
- Conducted testing, design reviews, and code reviews, debugging and addressing complex issues to lower post-deployment defects by 50%.

PROJECTS

- Developing CPU architecture by designing core modules in VHDL, creating and executing test benches, and simulating in Vivado.
- Designing Android mobile app, implementing CI/CD pipelines via GitHub Actions, and writing Java-based unit and instrumentation tests to ensure functionality and reliability.
- Engineered digital components for sensor chip, including encoder, parallel-in serial-out shift register, and digital multiplexer (MUX), validating design using Cadence, and certifying reliable operation across multiple embedded applications.
- Simulated robotic interactions within 3D environments (Nvidia Omniverse and Meta's Habitat 3.0) to refine robot navigation and task completion in household contexts.
- Co-directed the full-stack development of a subscription management web app that automates reminders, built API server using Express.js with MySQL relational database, enabled secure and effective data retrieval, and attained a 100% user satisfaction rate during testing
